Mr. Schmoller

Short answer is yes, this work will begin in the spring. The more specific answer is that the plan would be to complete excavation work following additional sediment monitoring, which is proposed to be completed after heavy snow melts this winter and/or after high intensity rain fall events in the spring time. If results indicate that PCB concentrations within the deposited sediment in the storm sewer (i.e., within MH-1A and/or at the outfall) are below the WDNR industrial direct contact RCL, than excavation work will proceed following the monitoring events. The time frame will dependent on weather events and monitoring results.

Hope that makes sense, thanks!

I did review the excavation work plan. It can be implemented as proposed. The plan is to do this in the spring?

Attached is an updated figure, sorry about that. Please let me know if this doesn't quite meet your expectation.

On a different note, have you had a chance to review the memo that Alina & TRC sent at the end of November (check for fee sent Dec. 8) on the rain garden excavation work plan?

This will satisfy the reporting requirements for letting the department know what work has been done. One thing: On the figure I can not tell where the work took place, can you provide a figure showing where the concrete was removed.

Mr. Schmoller

Attached are documents summarizing concrete work that was done in our plant on December 11th. You'll find the notification letter, the Figure of our plant, as well as copies of the lab report for disposal of the concrete. Please let me know if you'd like me to mail a copy of this notification or if you'd like this notification any other way/format now or in the future.

Thank you
